

CONCRETE STUDIO · SUSSEX

Concrete worktops, cast to fit.

Worktops, islands and sinks, cast in one piece where a slab would need a joint. Made near Brighton.

ROKA.STUDIO

Morning light runs the full length of the island without meeting a join. The waterfall end drops to the floor in the same piece. The sink is part of the top.

ROKA Studio casts concrete worktops, islands and sinks for kitchens and bathrooms. Each piece is made to your plans, or to our measure, in our workshop near Brighton, from mixes we formulate ourselves.

We fit within about 50 miles of Brighton, and deliver supply only across mainland UK. Every piece carries a five-year guarantee.

Worktops come first.

Kitchen runs, islands, bathroom vanities and utility tops, made to the millimetre. The same mixes and the same workshop make the rest.

Kitchen worktops

Long runs, L-shapes and odd angles, cast whole.

Islands and waterfall ends

The top and the end in one piece, down to the floor.

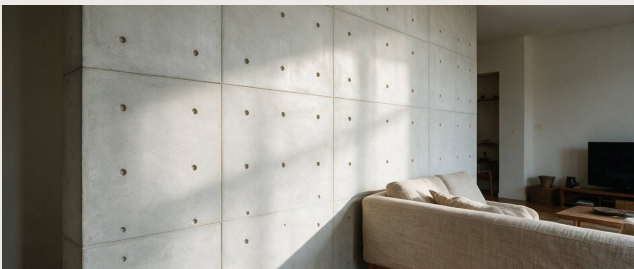

Sinks and basins

Cast with the worktop or vanity, from £450.

Hearths and surrounds

Hearths at £850 a m². Surrounds from £1,200.

Wall cladding

Panels cast to your sizes, with architectural tie holes if you want them.

Outdoor kitchens

Tops for BBQs and garden kitchens, with the grill opening cast in.

Prices are supply only. Fitting is quoted.

No joins. No rim.

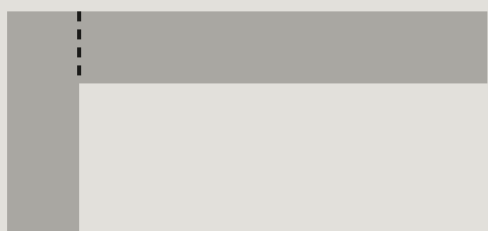

The sink and drainer come out of the same mould as the worktop.

One piece, no joints.

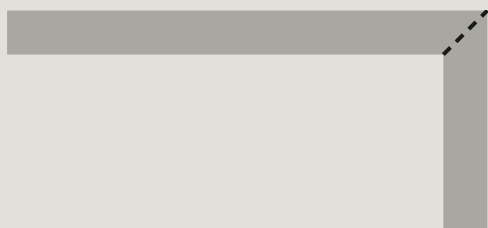

A slab is cut to size, so long runs, corners and waterfall ends meet at a joint. Your piece is cast whole, in a mould built to your drawings. A 3 m run, an L, a waterfall end or an awkward wall angle can all come out of one mould.

The sink can come out of the same mould. Its walls run straight down from the worktop, with drainer grooves cast into the top. There's no rim to catch dirt and no seam to fill.

CUT FROM SLAB

Corner: two pieces and a joint.

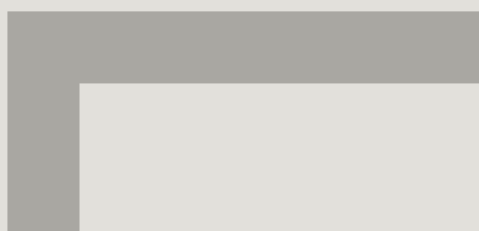

Waterfall end: mitred and glued.

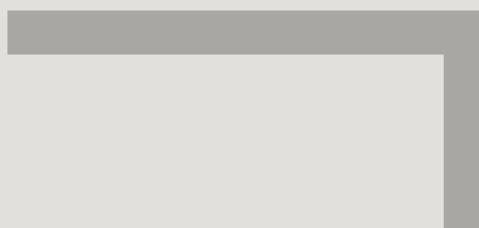

Sink: dropped in, rim and seam.

CAST BY ROKA

Corner: one piece.

Waterfall end: cast with the top.

Sink: cast with the top, no rim.

Dashed lines show where a slab is joined.

Why concrete.

Made to your size

Any length, any shape, any depth of edge.

It takes the heat

The sealer is rated to 149°C, so a pan of pasta goes straight from the hob to the top.

Cool to the touch

Soft in the light and solid under your hand. No two pieces come out the same.

Yours in colour

Nineteen named colours and two finishes, or a match to something you already own.

Guaranteed for five years

Remade in the first year if we got it wrong.
Repaired to year five.

Kinder to make than quartz

Less silica in the mix, and nothing cut dry on fitting day.

Two finishes.

Cream

Straight from the mould, sealed as it is. The deepest version of the colour, flat and calm, with soft cloud in the surface.

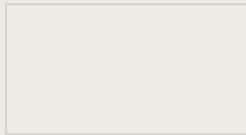

Salt and pepper

Diamond-ground to 800 grit, where polishing begins. Fine sand shows through in lighter and darker tones of the same colour, and it catches more light.

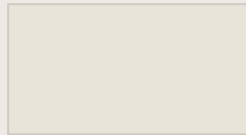

Polished and terrazzo finishes by special order. We talk them through and send a sample first.

Nineteen colours.

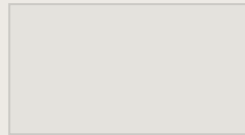

Or a match to something you already own.

PROJECT

Converted barn, Steyning.

Cast in the kitchen it lives in.

The island was cast on site, in one piece with its waterfall end. A finished top that size would never have come through the door.

Around it we cast the perimeter worktops and built the cabinets in Baltic birch ply, with patinated copper doors.

Living with it.

Will it crack?

It shouldn't. Every top is reinforced, and supported properly when it's fitted. If it cracks through our making, we remake it.

Will it stain?

Every piece is sealed with SureCrete XS-327, a two-part sealer that soaks into the concrete. Water beads on it, and most food and household spills wipe off.

Is it heavy?

About the same as granite or quartz at the same thickness. Where weight matters, glass-fibre reinforced concrete can be made lighter and still keep the look of a thick edge.

How do I look after it?

Warm water and a soft cloth. That's it. The seal can be touched up in place, years from now.

149°C

Heat rating of the seal

5 years

Guarantee, remade in year 1

XS-327

Sealer by SureCrete, matte

5

Five years. Remade if we got it wrong.

If anything goes wrong in the first 12 months because of how we made it, we remake it. In years two to five we repair it. If a repair won't do, it's remake.

Supply-only pieces are covered for five years too, once you send us a photo of the support. Full terms are at roka.studio/guarantee.

The price.

£850

a square metre, up to 30 mm thick.

Each millimetre over 30 mm adds £15 a square metre. That buys the piece, made and sealed. Fitting and delivery are quoted for your job, and the calculator below gives you the number in a minute.

WORKED EXAMPLES

Kitchen run, 3 m long, 600 mm deep	1.8 m ²	£1,530
Island, 2.4 x 1 m, 30 mm, one 900 mm waterfall end	3.3 m ²	£2,805
The same island at 50 mm	3.3 m ²	£3,795
Integrated sink, cast with the worktop		from £450
Hearth, 900 x 900 mm, 30 mm thick	0.81 m ²	£688.50

Your price, straight away.

Put your sizes into the calculator at roka.studio. Then order it, have the quote sent, or talk to us about a site visit.

From drawing to fitting.

1

Free samples

Pick the colours you like and we post them.

2

Your price

Use the calculator, send your drawings, or book a site visit.

3

Drawings

We draw every piece, with every cut-out and edge, and you sign them off.

4

Casting

Three to six weeks from sign-off. Ask if you need it sooner.

5

Fitting

We fit within about 50 miles of Brighton, or deliver supply only across mainland UK.

THE STUDIO

15

Mixed, cast and sealed near Brighton.

ROKA Studio is a concrete studio in West Sussex, led by its founder, Aaron. We formulate our own mixes in GFRC, glass-fibre reinforced concrete, and UHPC, an ultra-high performance concrete.

Every mould is built to your drawings. When a piece is too big to carry in, we can build the mould in your room and cast it there, as we did in Steyning.

We make the concrete and work alongside your kitchen maker or fitter.

Get your free samples.

Pick your colours online and we post them, sealed like a finished top. Hold them against your cabinets, your floor and your light.
